

Webinar on Good Regulatory Practices and Medical Device Regulation, COVID-19 Medical Device Regulatory Convergence Project (Indonesia)

June 15 2022

“Together for a healthier world”

Dr Tedros Adhanom Ghebreyesus

Director-General

Key Themes of WHO's 13th General Programme of Work 2019-2023

Mission

Promote Health - Keep the World Safe - Serve the Vulnerable

Strategic Priorities

| | |
|----------------------------|--|
| Health Coverage: | 1 billion more people with health coverage |
| Health Emergencies: | 1 billion more people made safer |
| Health Priorities: | 1 billion lives improved |

Medicines and other Health products (MPH)
Dr. Mariângela SIMÃO, Assistant Director General

**DELIVERING
QUALITY-ASSURED
MEDICAL PRODUCTS
FOR ALL**

2019-2023

WHO's five-year plan to help build effective and efficient regulatory systems

Outline

Good Regulatory Practices Principles

Good Reliance Practices Principles

WHO Regulatory System Strengthening activities

Global Model Regulatory Framework for medical devices including IVDs

Good Regulatory Practices Principles

<https://apps.who.int/iris/bitstream/handle/10665/340323/9789240020900-eng.pdf>

WHO Good Regulatory Practices

Purpose

- Present the **high-level principles** of Good Regulatory Practices.
- Principles to serve as **benchmarks**.
- Guide Member States in **prioritizing** their regulatory activities according to: resources, national goals, public health policies, medical products policies and the medical product environment

Scope

- **Relevant to all regulators**, irrespective of resources, maturity or regulatory models; equally applicable to supranational (e.g. regional), national and subnational regulatory systems.
- **Related audience**: institutions and policy-makers, regulatory networks, regulated parties

WHO Good regulatory practices in the regulation of medical products. WHO Expert Committee on Specifications for Pharmaceutical Preparations: Fifty-fifth report. Technical Report Series, No. 1033, Annex 11; 2021. Link: <https://www.who.int/publications/i/item/55th-report-of-the-who-expert-committee-on-specifications-for-pharmaceutical-preparations>

WHO Good Regulatory Practices

Objectives:

- Ensure sound and effective regulation of medical products.
- Higher-quality regulation, better regulatory decision-making and compliance.
- More efficient regulatory systems and better public health outcomes.
- Up to date regulatory systems.
- Promote trust among regulatory authorities and other stakeholders.
- Facilitate international cooperation.

Complemented by:

Nine high-level principles

Legality

Consistency

Independence

Impartiality

Proportionality

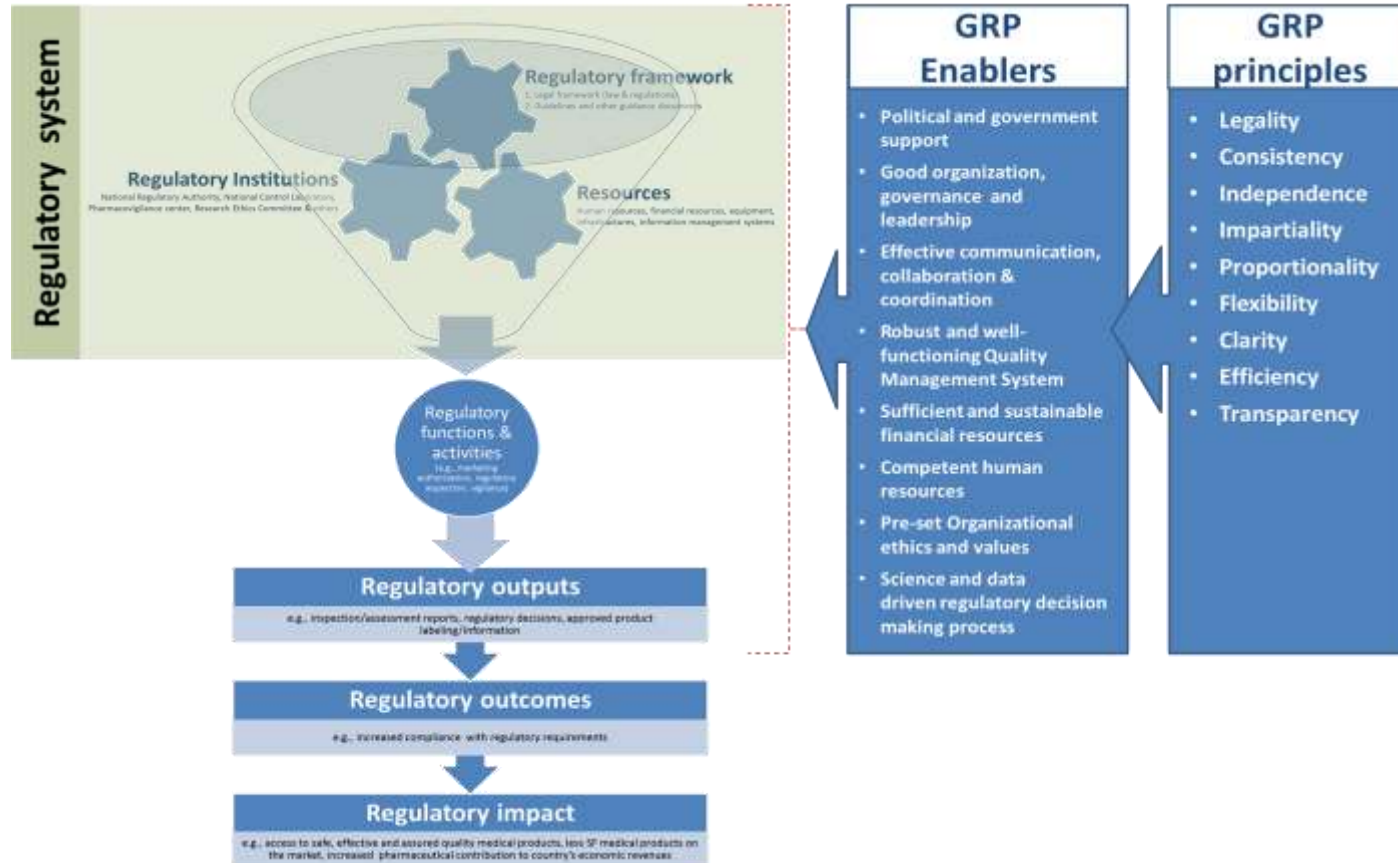

Flexibility

Clarity

Efficiency

Transparency

Good Regulatory Practices Summary

Principles and enablers of Good Regulatory Practices (GRP) and Components of the regulatory system

Good Reliance Practices Principles

<https://apps.who.int/iris/bitstream/handle/10665/340323/9789240020900-eng.pdf>

Principles of Reliance

International cooperation essential to ensure the safety, quality and efficacy/performance of locally used medical products.
No regulatory authorities even the best resourced one can do it alone.

Make best use of available resources and expertise, avoid duplication and concentrate regulatory efforts and resources where most needed.
Promote a more efficient approach to regulatory oversight, thereby improving access to quality-assured, effective and safe medical products over the entire life-cycle.

The act whereby the regulatory authority in one jurisdiction takes into account and give significant weight to assessments performed by another regulatory authority or trusted institution, or to any other authoritative information in reaching its own decision. Various forms of reliance approaches.

The relying authority remains independent, responsible and accountable regarding the decisions taken, even when it relies on the decisions, assessments and information of others.

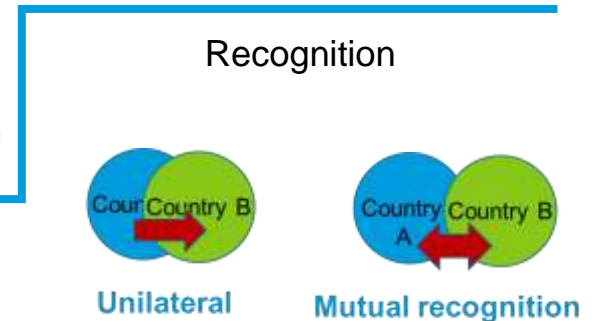

Key concepts of reliance

Standard processes

Work-sharing including joint activities
Abridged pathways using reliance

Independent decisions
based on its own reviews
and/or inspections

Leveraging regulatory work
Performed by other competent and trusted
authorities to reduce the workload

Unilateral or mutual recognition
based on treaties or equivalent

Building trust between NRAs, increasing reliance and efficiency

WHO Good Reliance Practices – Key concepts

Recognition (vs. reliance): more formalized approach to reliance, i.e. recognizes the decisions of another regulatory authority, system or institution, with no additional assessment. Usually requires formal and binding legal provisions.

Unilateral vs. mutual: unilaterally/without reciprocity or mutual recognition based on binding mutual agreements or treaties.

Life cycle approach: to apply across the full life cycle of medical products and all regulatory functions (e.g. important for vigilance and post-authorization activities).

Risk-based approach: NRA to define own strategy (e.g. based on type and source of products evaluated, level of resources and expertise available, public health needs and priorities of the country, and opportunities for reliance) .

Regional reliance mechanisms: assessment for medical products can be conducted centrally based on a regional regulatory system for a group of countries (binding or not).

WHO Good Reliance Practices – General considerations

Reliance anchored in a national regulatory authority strategy

Cultural change

Flexibility in approach: “one size doesn’t fit all”

Investment of resources and time in implementing reliance

“Sameness” of the product in different jurisdictions

The role of industry

Reliance in case of a public health emergency

“Sameness” of a product

“two products have identical essential characteristics”

- **All relevant aspects** medical devices and in vitro diagnostics to be considered.
- **Essential role of the manufacturer** to confirm the sameness of a product and to provide the same documentation to different NRAs.
 - ✓ the same regulatory version;
 - ✓ the same product code(s);
 - ✓ the same site of manufacture and quality management system;
- Except for additional country-specific information submitted for review (stability, local label etc.).
- Post-approval changes and vigilance reliance activities as long as the sameness is maintained.

Examples of Reliance in the Medical Device field –

Abridged Regulatory Pathways

- WHO-Collaborative Registration Procedure for in-vitro diagnostics.

<https://www.who.int/publications/m/item/collaborative-procedure-between-the-who-and-nra-s-in-the-assessment-and-accelerated-national-registration-of-who-prequalified-ivd-s-annex4>

- Abridged pathways for the approval of medical devices with approval from other regulatory authorities.

Example in Australia, <https://www.tga.gov.au/publication/use-market-authorisation-evidence-comparable-overseas-regulators-assessment-bodies-medical-devices-including-ivds>, Singapore, <https://www.hsa.gov.sg/medical-devices/registration/overview#toggle=togglepanel-overseas-reference-regulatory-agencies>

- WHO EUL Facilitated Procedure for SARs CoV-2 assays

<https://www.who.int/teams/regulation-prequalification/regulation-and-safety/facilitated-product-introduction/eul-facilitated-procedure>

- Thai-FDA - Singapore HSA Regulatory Reliance

Reliance system for a group of countries

Medical Device Single Audit Program (MDSAP), developed under the International Medical Device Regulators Forum (IMDRF): regulatory authorities of Australia, Brazil, Canada, Japan and the USA have pooled their resources into a robust system of oversight by third party auditing organizations, which, in turn, audit the quality management systems of medical device manufacturers.

<https://www.fda.gov/medical-devices/cdrh-international-programs/medical-device-single-audit-program-mdsap>

WHO Regulatory System Strengthening activities

Objectives of the WHO regulatory system strengthening programme

1

- **Build regulatory capacity** in Member States consistent with good regulatory practices

2

- **Promote regulatory cooperation, convergence and transparency** through networking, work-sharing and **reliance**

- **World Health Assembly Resolution 67.20 in 2014**
 - ✓ recognized the importance of strong regulatory systems to a well-functioning healthcare system and the attainment of health-related United Nations Sustainable Development Goals and Universal Health Coverage.

WHO Global Benchmarking Tool (GBT) for evaluation of national regulatory systems

The WHO Global Benchmarking Tool (GBT) is a means by which WHO evaluates regulatory systems through a comprehensive and systematic benchmarking. The tool and benchmarking methodology:

- identifies strengths and areas for improvement;
- facilitates the formulation of an institutional development plan (IDP) to build upon strengths and address the identified gaps;
- aids in the prioritization of IDP interventions; and
- helps to monitor progress and achievements.

The development of the WHO Global Benchmarking Tool is the result of a collaborative effort between WHO headquarters and Regional Offices with support from country regulators. The tool builds on other WHO tools including the WHO Vaccine data collection tool, WHO Data Collection Tool for the Review of Drug Regulatory Systems and the WHO Regional Office for the Americas (PAHO/AMRO) assessment tools and includes features of proven benefit from these tools such as computerization, categorization of indicators/sub-indicators and inclusion of fact sheets.

New features include:

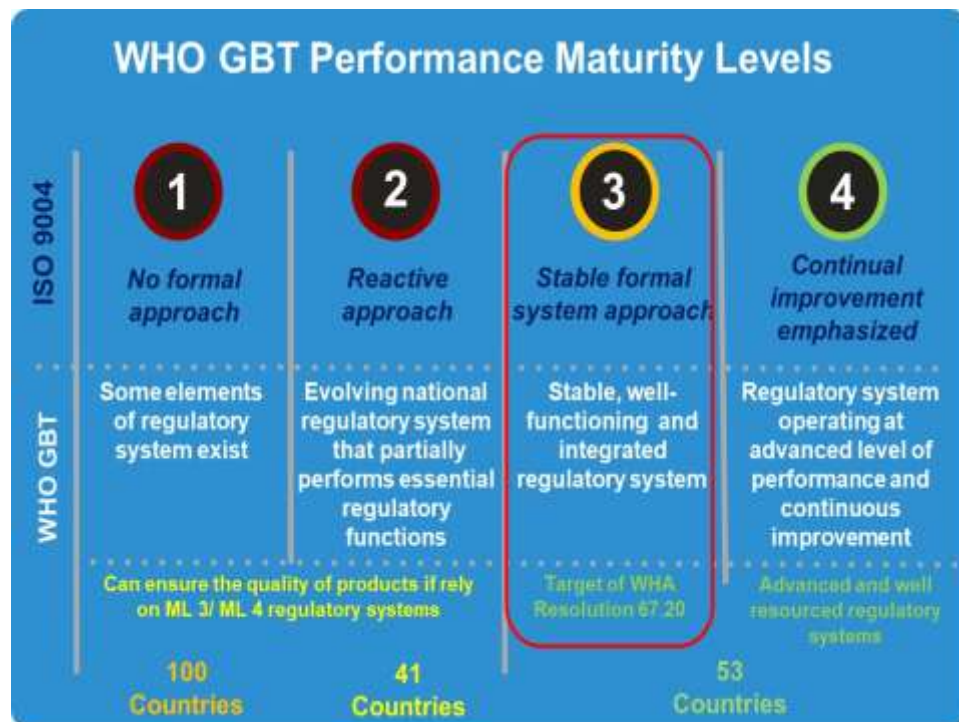

- incorporation of good regulatory practices (GRP) principles;
- adoption of the maturity level concept referenced in ISO 9004 standard;
- inclusion of a group of indicators to assess regulatory measures to prevent, detect, and respond to substandard and falsified (SF) medical products;
- integration of the regulatory relevant indicators from the WHO good governance for medicine (GGM) assessment; and
- expansion of the indicators for measurement of Quality Management Systems (QMS) of different regulatory functions.

WHO Benchmarking of National Regulatory Authorities (NRAs)

- The current GBT Rev VI covers only medicines, vaccines and blood and blood products
- Revision of the tool to integrate medical devices and IVDs indicators into the GBT was initiated end of last year. The work involved WG members: WHO, Medical devices and IVDs regulators and laboratory experts and other MDs experts who are non regulators.
- **Discussion** : 1 September 2020 to June 2021.
- **Status**: Editorial work and publishing in Q4.
- **Pilot**: Q1 of 2022

Global Model Regulatory Framework for medical devices including IVDs

<https://apps.who.int/iris/handle/10665/255177>

The WHO Global Model Regulatory Framework for Medical Devices including IVDs.... Key points

WHO Global Model Regulatory Framework for Medical Devices including in vitro diagnostic medical devices

WHO Medical device technical series

- ✓ Published by WHO in 2017; on going review
- ✓ Relevant for WHO Member States;
- ✓ Recommends two steps i.e. basic regulatory controls towards an expanded level;
- ✓ Describes the role and responsibilities of a country's NRAs for implementing and enforcing the regulations;
- ✓ Describes circumstances in which a regulatory authority may either: "rely on", or "recognize" the work products from trusted regulatory sources

Why revise and update the GMRF

- ✓ The WHO Global Model was published in 2017, developed in 2015-2016.
- ✓ Rapidly changing field, technologies are advancing in their nature and complexity e.g., AIs, Software as medical devices.
- ✓ Update of guidance such as PMS & MS, GRel, GRP and discussions during integration of MDs indicators into the GBT
- ✓ Experience with implementation including challenges experienced by regulators during the COVID-19 pandemic which clearly demonstrates the importance of safe, reliable, and appropriate quality medical devices including IVDs.
- ✓ Experience in the use of the GMRF teaches that countries would benefit expansively from a more detailed guidance on some topics.

Outline of the revised GMRF

- Introduction
- Definition, classification, essential principles, and conformity assessment of medical devices
- Enabling conditions for effective regulation of medical devices including IVDs
- Establishing a stepwise approach to regulating medical devices
- Regulatory pathways
- Additional topics
- Implementation

Thank you
